2 INTRODUCTION

2.1 GETTING STARTED: JAS CONNECT STANDARD FORWARDING REGISTERED SHIPMENT STATUS API

The JAS Connect Forwarding Registered Shipment Status API (Application Programming Interface) provides real-time tracking and status updates for forwarding shipments managed within the JAS TMS system. Allows your system to communicate directly with our shipping systems over the internet. It enables system integrators, logistics platforms, and clients to query the status and milestones of any forwarding shipment using a unique shipment identifier/Job Number (or) House Bill Number (or) Reference Number and JAS system Org Code. The APIs are built on REST and provide a secure channel of communication, as all web calls are made through secure HTTPS.

3 Overview

3.1 JAS CONNECT STANDARD REGISTERED SHIPMENT STATUS API

3.1.1 INTRODUCTION

This document contains a complete guide to use the forwarding shipment status of API, which is one of the main functionalities required by customers to track shipping. The forwarding shipment status API service is part of the available JAS Connect Standard APIs allowing you to track shipments depending on Shipment Number or House Bill number sent in the path parameter. The format of the API response can also be selected by specifying the header value of the API. The header needs to be defined as “Content-Type” and the values that need to be provided in the header should be “application/Json” if the response is needed in JSON format. The value in the header should be “application/xml” if the response is needed in XML format

The forwarding registered shipment status API service provides these features:

API Features

This API requires the setup of controlling customer C1 org code mapped to the Client ID in the Azure table. This feature will ensure that the controlling customer is always known in C1 since the shipper and consignee can come in incorrectly. If this is not setup, the expected behavior of the API is to send a 400-error message advising that the controlling customer has not been setup.

3.1.1.1 SECURITY

This section provides an overview of the security mechanisms in place to ensure that only authorized users and clients can access the JAS Connect API endpoints. All JAS Connect API requests must be securely authenticated before they can interact with the system. JAS Connect support multiple authentication methods to ensure flexible and secure access to the API.

3.1.1.1.1 Authentication Methods

We support the following authentication methods to ensure that API requests are securely authorized:

3.1.1.1.1.1 API Key Authentication

API keys are used to authenticate requests to the API. The API key must be included in the request header to authorize the client.

©2023 JAS Worldwide, Inc. All rights reserved. All material proprietary and confidential.

- The JAS Connect Team will provide you the API Key required for authentication.
- Include the API Key in Requests: To authenticate your requests, include the API key in the header in the following format:

Header Name	Header value
Method	POST
Base URLs	Test Instance: http://apisvcs-connect-test.myjas.com Prod Instance: http://apisvcs-connect.myjas.com
Resource URLs	v1/registeredshipments/forwarding/statusxml v1/registeredshipments/forwarding/statusjson
Host	Test: apisvcs-connect-test.myjas.com Prod: apisvcs-connect.myjas.com
api_key	<<Key value obtained from portal>>

b.) OAuth 2.0 Authentication

OAuth 2.0 is a token-based authorization protocol that allows third-party applications to access the API on behalf of the user. OAuth 2.0 is suitable for scenarios requiring delegated access to user data.

The client credentials information and the API key value required in the authentication will be provided by the JAS Connect Team.

After the ClientID, client secret, Authorization end point details are provided by JAS Connect team, make a request to obtain the bearer token.

Fields	Values
HTTP Request	POST

Get access token URL	Test Instance: https://apisvcs-connect-test.myjas.com/oauth2/token Prod Instance: https://apisvcs-connect.myjas.com/oauth2/token
Host	apisvcs-connect.myjas.com
Content-Type	application/x-www-form-urlencoded
grant_type	client_credentials
client_id	<YOUR_CLIENT_ID>
client_secret	<YOUR_CLIENT_SECRET>

- Include the Access Token and the API Key obtained above in the headers while calling the JAS Connect API End point.

  Access token, include it in the "Authorization" header as a "Bearer <<token>>" in your API requests.

Example Request:

Fields	Values
Method	POST
Base URLs	Test Instance: http://apisvcs-connect-test.myjas.com Prod Instance: http://apisvcs-connect.myjas.com
Resource URLs	v1/registeredshipments/forwarding/statusxml v1/registeredshipments/forwarding/statusjson

	Prod: apisvcs-connect.myjas.com
Authorization	Bearer << Access Token>>

c.) Basic Authentication

Basic authentication can be used by sending the username and password with each API request in the Authorization header. This is typically used for internal or less secure use cases.

Steps to Obtain Basic Authentication:

- Username and Password for Basic Authentication: Get the username and password required for basic authentication.

Example Request:

Fields	Values
Method	POST
Base URLs	Test Instance: http://apisvcs-connect-test.myjas.com Prod Instance: http://apisvcs-connect.myjas.com
Resource URLs	v1/registeredshipments/forwarding/statusxml v1/registeredshipments/forwarding/statusjson

	Prod: apisvcs-connect.myjas.com
Authorization	Basic < Base64_Encoded_Username: Password>

3.1.1.2 ENCRYPTION

By using HTTPS, all transmissions are ensured to be encrypted.

3.1.1.3 SIMPLE AND EASY TO USE

The shipment status is provided in easy-to-use API format.

3.1.1.4 ACCURACY AND ERROR HANDLING

JAS Connect API Response Codes and Descriptions

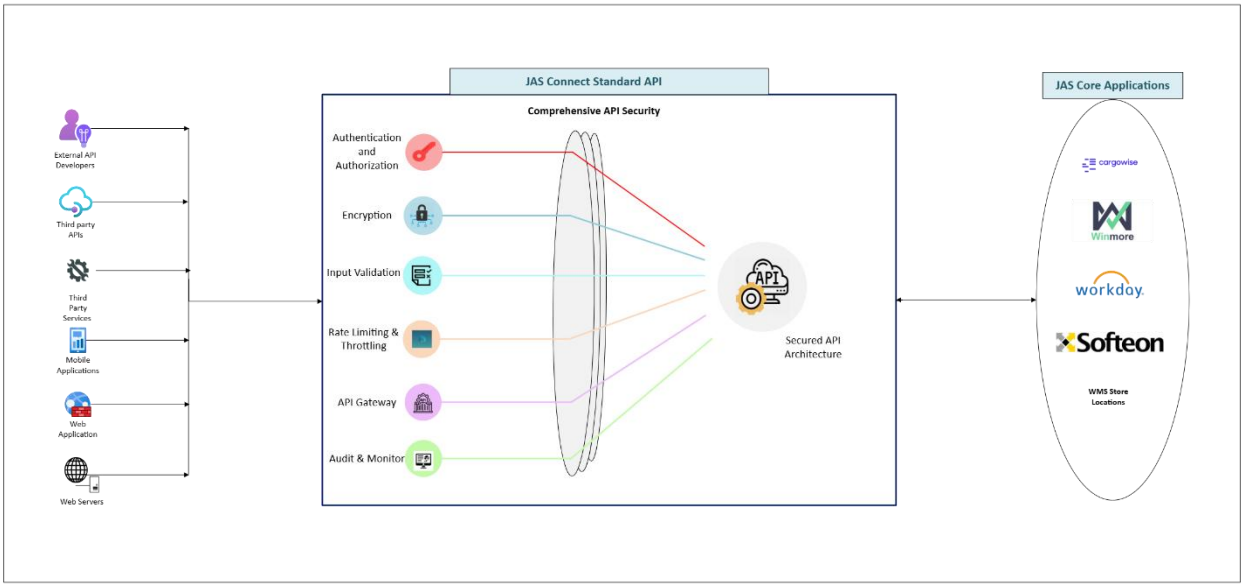

JAS Connect Error Code	JAS Connect Error Description
200	Success
400	Bad Request - There are miscellaneous errors with the request, for example, mismatches between the request and what is allowed for the operation.
401	Unauthorized or 403 Forbidden - Authentication errors.
404	Not Found - Invalid URL path.
413	Request Entity Too Large - The request data was too large. This is based on the SOA Input Size quota.
500	Internal Server Error - This generic error message appears when an unexpected condition was encountered, and a more specific message is not suitable.
503	Service Unavailable - The caller has hit a throttle, or the request was rejected because the Atom is starting or stopping.
522	Connection Timed Out - This message is returned to the client when the SOA Worker Maximum Execution Time has been exceeded.

4 API Specification- Data Type Element Description, Validations

4.1 API Request Structure- XML

The registered shipment status API service is part of the available JAS Connect Standard APIs allowing you to track shipments depending on Shipment Number or House Bill Number or Reference Number and JAS Org Code.

```
<?xml version="1.0" encoding="UTF-8"?>
<Status>
        <ShipmentNumber></ShipmentNumber>
        <HouseBillNumber></HouseBillNumber>
        <ReferenceNumber>241818886</ReferenceNumber>
<ContainerNumber></ContainerNumber>
        <OrgCode>ORGCODEUS</OrgCode>
</Status>
```

Request Payload					
Node Name	M – Mandatory O – Optional C – Conditional X – Not Applicable	Type	Max Length	Example	Notes
Shipment Number	C	String	10	S123456789	One of these numbers is required.
HouseBill Number	C	String	11	HWB12345678	
Reference Number	C	String	40	Ref12345TR56675	
Container Number	C	String	12	MAEU1234567	
Org Code	M	String	10	ORGCODABC	An Org Code is required at all times.

The user can pass either a Shipment Number (or) House Bill Number (or) Reference Number (or) Container Number and must always include an OrgCode.

©2023 JAS Worldwide, Inc. All rights reserved. All material proprietary and confidential.

If more than one number is provided, the logic of checking will start with the Shipment Number, then the HouseBill Number, then the Reference Number and then the Container Number.

When the API request data does not return any value, then we will send 400 error stating that no Shipment number was found.

If no OrgCode is provided, then we will return an OrgCode is required 400 error messages.
