2 INTRODUCTION

2.1 GETTING STARTED: JAS CONNECT STANDARD FORWARDING ORDER Status API

The JAS Connect Forwarding API (Application Programming Interface) enables external customers, and third-party logistics platforms to seamlessly get forwarding orders status with JAS Worldwide management. The API is built based on REST protocol and provides a secure channel of communication, as all web calls are made through secured HTTPS.

3 Overview

3.1 JAS CONNECT STANDARD FORWARDING ORDER Status API

3.1.1 INTRODUCTION

This document contains a complete guide to use the forwarding order API, which is one of the main functionalities required by customers to get forwarding orders status. The JAS Connect Forwarding Order Status API service is part of the available JAS Connect APIs allowing you to get forwarding Orders status.

3.1.2 Order API FEATURES

The JAS Connect Forwarding Order API service provides these features:

3.1.2.1 SECURITY

This section provides an overview of the security mechanisms in place to ensure that only authorized users and clients can access the JAS Connect API endpoints. All JAS Connect API requests must be securely authenticated before they can interact with the system. JAS Connect support multiple authentication methods to ensure flexible and secure access to the API.

Authentication

Oauth 2.0 is a token-based authorization protocol that allows applications to access the API on behalf of the user. Oauth 2.0 is suitable for scenarios requiring delegated access to user data.

Steps Involved in accessing the Shipping API

1. Access Token Generation

Fields	Values
HTTPS Request	POST
Get access token URL	https://<<URL_PROVIDED_IN_THE_PORTAL>>/oauth2/token
Host	<<PROVIDED_IN_THE_PORTAL>>
Content-Type	application/x-www-form-urlencoded

grant_type	client_credentials
client_id	<YOUR_CLIENT_ID>
client_secret	<YOUR_CLIENT_SECRET>

2. Accessing the Shipping API Resources

Include the Access Token and the API Key obtained above in the headers while calling the Shipping API End point. Access token, include it in the "Authorization" header as a "Bearer <>" in your requests. API Key, include it in the "x-api-key" header value sent by My JAS Connect Administrator Team.

Fields	Values
Method	POST
Base URLs	Test Instance: https://<<TEST_INSTANCE_URL_IN_PORTAL>> Prod Instance: https://<<PROD_INSTANCE_URL_IN_PORTAL>>
Resource URLs	/v1/ForwardingOrder/statusjson /v1/ ForwardingOrder/statusxml
Host	Test: <<TEST_INSTANCE_IN_PORTAL>> Prod: <<PROD_INSTANCE_IN_PORTAL>>

Note: - Customers coming through third party applications, each customer should be having their own client id and client secret registered through the portal. The X-API-KEY will be provided for the third-party applications instead for each customer.

3.1.2.2 *ENCRYPTION*

By using HTTPS all transmissions are ensured to be encrypted.

3.1.2.3 *SIMPLE AND EASY TO USE*

Creating shipments, requesting pickups and other functionalities are easily generated by providing very basic and simple information about the shipper, consignee and shipments.

3.1.2.4 *ACCURACY AND ERROR HANDLING*
